#### TRAINING PROFILES

The first government auditor training profile was developed in 1979 by the Federal Auditor Executive Council to provide an overall •mression of the trees of training for developing and maintaining the skills of a government auditor. The profile was intentionally designed to be broad and flexible to allow each governmental audit organization to use it as a guideline in developing a profile to meet its specific needs.

The passage of the Inspector General Act and the tremendous technological changes in recent years have placed increased demands on the skills required of government auditors. The original profile no longer covers some of these skill needs; therefore, the **PCIE** Training **Committee** adopted a project under its Audit Subcommittee to expand and update the government auditor profile.

The new profile (enclosure 3) is in the same format as the original one; however, the auditing disciplines have been revised and expanded to include the additional skills required of today's government auditors.

The new profile also retains the flexibility of the old one and anticipates that government audit organizations will use it as a guide to develop their own profiles.

Standard training profiles" do not exist for senior executives. However, the Office of Personnel Management has published an •xcellent guide titled "Developing Executive and Management Talent," dated August 1980, that can be used for SES career development planning. This publication •stablishes an outline for the senior manager to follow in addressing both the technical and executive competencies required for his/her position •nd the courses, Federal fellowships, and developmental assignments available to meet the required training needs.

19.0 Major Systems/Programs Management	A19			

#### Description of Training Levels

- A. Basic. All beginning auditors should receive basic level training. This level of training consists of several categories and individual disciplines to saist in the development and adaptation of audit organizations with differing missions. The individual training disciplines would depend on the Dission and responsibilities of the audit organization. Disciplines can be provided as individual courses or as training modules in an entry-level course. Substantial progress should be made in providing formal training in essential skills during the first year of employment. New employee orientation, auditing principles and procedures, written communications, nonwritten communications, and introductory training unique to the audit Dission should be accomplished. These should be followed by basic training in audit applications and evaluation, investigation orientation, automated data processing and, where necessary, contract and/or grant auditing. Basic-level training should be essentially complete within 2 years of employment. Total investment in basic-level training may include from 6 to 8 weeks of formal classroom and self-study time.
- B. <u>Intermediate</u>. Intermediate **level** assumes substantial completion of basic-level training. Courses at this level represent increases in the **complexity** of disciplines provided at the basic **level** and introduce **new or** remedial training for developing auditor effectiveness and/or specialization. Depending upon the audit mission and the need for specialization, an additional 8 to 10 weeks of intermediate level **training** may be required. **The** majority of intermediate and all planned basic **level training should** be accomplished within four years of initial employment.
- c. Advanced. Advanced-level training is designed for senior auditors and supervisory-level personnel. It assumes auditors have achieved mid-level responsibilities and have fulfilled basic and intermediate requirements. Training at this level is expected to develop in-depth knowledge and skills needed to manage an audit from inception to issuance of an audit report and to provide for technical specialists in support of unique ission requirements. Heavy management and professional development should coincide with advanced written and nonwritten communication skills. Selected emphasis in automated data processing and other specialized technical areas are needed to maintain and improve organization capabilities and proficiencies. Investment in advanced training should include approximately 3 weeks a year over an estimated 3 to 5 years to achieve minimum proficiency for executive-level consideration. In addition, individual development may include a graduate education program and success on professional certification exams.
- D. Executive Executive level training enhances upper-level management knowledge and **skills thate** re related to **government** audit **organization** operations. It is not intended to **replace** executive development programs established for senior executives by the **OPM** but **complementthose** programs that advance internal audit operations and professionalism in the auditing community.

#### Description of Training Categories

- 1.0 New Employee Orientation. This category, intended for all new audit employees, provides the auditor with the basic knowledge needed as a federal OIG/audit agency employee. A course ncompassing this category gives the new employee an overview of laws, regulations, directives, policies, procedures, mission, programs, and responsibilities. This course should be given as soon as possible after the auditor begins work and should not last more than 2 days.
- 2.0 Auditing Principles and Procedures. The auditor needs to learn the basic auditing principles and procedures to accomplish the audit function. At the basic level, the disciplines covered may be incorporated into a single, comprehensive 2 week course that enables the auditor to function effectively as a junior member of an audit team. This course should be completed as soon as possible, and certainly within the first year of employment.

The intermediate-level disciplines may also be incorporated into a 2 week course. At this level, new disciplines are added and complexity is increased. Reinforcement is also a major goal for some disciplines. At the ●nd of the intermediate level, the auditor **should** have sufficient knowledge and skills to begin to assume responsibilities as an audit senior, lead auditor or **auditor** in-charge.

3.13 <u>Audit Applications and Evaluation</u>. This category is designed to teach auditors how to use important techniques and tools. At the basic level, the disciplines are combined into an overview course. Auditors will not develop operating expertise but will be able to recognize needs and where to go to get the need filled. The basic-level course can be given at any time during the first 30 months of employment.

The intermediate level strives to develop sufficient skills so the auditor can use **the** technique or tool in job situations. Statistical sampling and cost benefit analysis are types of courses that **might** be covered at this level in the quantitative methods discipline.

At the advanced level, skills would be developed to a high degree--such 3s the organizational expert.

All auditors need to take the basic-level courses. However, at the intermediate and advanced levels, auditors should be assigned on the basis of individual aptitude and organizational needs.

4.0 Written Communications. The courses at all levels should take about 1 week. The ability to write clearly and concisely and to use the proper style and format are of utmost importance to Ouditors. At the basic level, the course introduces the new employee to government style. The subjects would include formats, the use of audit terms, and how to write working paper summaries and findings.

At the intermediate level, new disciplines are added, the complexity is increased, and the techniques learned during the basic-level course are reinforced. At this level, more • mphasis is placed on report writing and on the Importance of presenting material in an unbiased reamer.

Courses at the advanced level will concentrate on writing whole reports and on editing and reviewing the work of others.

- 5.0 Nonwritten Communications. The disciplines in this category are designed to help the auditor deal with auditees and others by telephone, interview, meetings, briefings, and so forth. Only two disciplines in this-category should be required of all auditors—interviewing/entrance and exit conferences at the basic level which should be given within the first year of training, and oral presentations at the intermediate level. Other disciplines will be given if needed.
- 6.0 Audit Management and professional Development. This subject teaches the tools and concepts audit supervisors need in order to use the resources entrusted to them and to carry out their audit responsibilities in a professional manner. The intermediate-level courses are designed to prepare the lead auditor/auditor-in-charge for these responsibilities. No basic level courses are given. This training is required for all employees advancing to the middle-management level. The courses provide an understanding of the role of the supervisor, the styles of leadership, motivation, and workload planning.

**New** courses are added at both the advanced and executive levels **to** broaden perspectives and to deal with organizational complexity. Included in the upper level are courses in resource management, organizational development, and productivity.

7.0 Investigation Orientation.' This category is not designed to form auditors into investigators, only to make them aware of investigative activities and the types of activities investigated and to foster cooperation and teamwork.

At the basic level, the disciplines can be incorporated into a brief overview of investigative activities and techniques. At the intermediate level, a more in-depth 1 week course should be given that emphasizes the elements of fraud, investigative techniques, and the responsibilities of the auditor in reporting suspicious activities to investigators and in collecting and preserving evidence. At the advanced level, the discipline calls for review, to sharpen the auditor's sense of awareness and cooperation.

8.0 Automated Data Processing (ADP). The first level of computer audit skills is required for each auditor. The skills make auditors aware of computer system areas. At the second level of skill, an auditor should be able to recognize evidence of common computer-fraud schemes and to evaluate internal controls, identify weaknesses in the controls, and use and adapt generalized audit software packages to test identified weaknesses.

ADP systems and should be capable of designing and implementing audit software routines. Level III computer auditors should also have some understanding of operating systems, software security, data-base management systems and data communications.

The knowledge and technical capabilities required at the respective skill levels are summarized in • nclosure 6.

9.0 <u>Microcomputers</u>. This category provides auditors with the knowledge and skills necessary to use microcomputers in the performance of audits. The basic level course introduces the auditor to microcomputer technology ● nd provides minimum skills for the operation of microcomputers. All auditors should receive basic-level training.

The advanced course develops **the** auditors' proficiency in **using** the advanced technical capabilities of microcomputers and of mainframe computers as an audit tool. The auditors should also be trained in the use of microcomputer software packages selected for audit use by the audit organization.

10.0 Contract Auditing. The introductory course at the basic level is designed to give auditors an overview of contract auditing. The other disciplines in this category are optional, unless the auditor is expected to have contract audit responsibilities. The disciplines include the federal procurement process, regulations, standards, principles, and requirements.

At the intermediate level, auditors are expected to develop contract audit expertise. (No courses are given above this level.)

11.0 <u>Grant Auditing</u>. The basic-level disciplines indoctrinate the auditor on the purposes of federal grants, grant agreement regulations, audit responsibilities, and the use of principles and methodologies to ● valuate grant activities.

At **the** intermediate level, which is optional unless the auditor has grant auditing responsibilities, single audit and block grant concepts are taught.

12.0 Federal Functional/Program Training. There are other categories of unique audit applications that are not common to all audit organizations and do not require mandatory training for all auditors. While the profile only shows training at the basic level, training can be offered to intermediate, advanced and © xecutive-level personnel if it is required by individual or agency needs. Examples of unique audit applications include: Federal Procurement and Contract Management (GSA); Major Weapon Systems/Programs Management (DoD); Transportation Management (DoT); Property Management (HUD).

## Skill Levels

CATEGORY	LEVEL I	LEVEL II	LEVEL III
Types	<b>All</b> trainee and journeyman-level auditors grades 7 to 12.	Selected auditor- in-charge or supervisory field auditors grades 12 to 13.	Selected headquarters level auditors, supervisors, grades 12 to 15.
Responsibilities	Participate in audits of internal controls in computer-based systems under the supervision of skill-level II.	Plan and supervise audits of computer-based systems using ADP audit techniques.	Plan and supervise audits of computer-based systems and advise and assist skill-level 11 auditors in using high technology ADP audit techniques.
Numbers	All auditórs.	Two to 3 per location.	Two to 20 per agency.
